Coreless Paper Roll

Paying for a core that is not necessary?

Introducing Coreless Paper Rolls

Coreless rolls have no plastic or cardboard cores. These rolls will typically have a centre hole of 8mm or 10mm diameter.

By eliminating the plastic or cardboard core, we are able to put more paper on a roll. This means fewer roll changes and higher productivity levels.

If your printer doesn't need a core, why would you?

NO CORE TO DISPOSE • ENVIRONMENTAL FRIENDLY •

Coreless

Going Green, Going Coreless

Advantages of coreless paper rolls:

1. Convenient and Time Saving

Operator can replace a new roll into the printer without removing and throwing away the core, saving time and enhancing cashier productivity, especially during peak hours.

2. Longer Paper Length

The paper length is much longer (10 - 35% longer depending on paper roll size), hence the roll needs to be changed less frequently, saving time and enhancing operator productivity especially during peak hours.

3. Save Storage Space

Minimise storage requirements by maximising your roll capacity. Coreless rolls will reduce warehouse storage space by 10 - 35%.

4. Less Dust

Cardboard cores create and accumulate dust in the printer. Operators need to clean the print head regularly to remove the dust to prevent damage to the print head. With coreless paper rolls, there will be less dust in the printer hence less damage to the print head.

5. Environmentally Friendly

No cardboard or plastic core to dispose of.
